Firm Overview

At AlphaSimplex we strive to help investors succeed in evolving financial markets by researching and analyzing market behavior and risk. We use these insights to create adaptive strategies that are attuned to changing market dynamics and help investors meet their long-term goals.

Our Philosophy

The Adaptive Markets Hypothesis, a theory of market behavior created by AlphaSimplex founder Andrew W. Lo, Ph.D., recognizes that financial markets are neither always efficient nor always irrational, but are instead highly competitive and adaptive. Market conditions are ever-changing; market volatility, risk premium, and cross-asset correlations are not static. In response, our products at AlphaSimplex are liquid, adaptive, and actively managed using a systematic and quantitative approach. We dynamically adapt our portfolios to current market conditions, rather than assuming that long-term historical relationships will continue to hold.

Percent of Assets by Client Type¹

Our Senior Investment Team

The AlphaSimplex Investment Team has diverse backgrounds in finance, statistics, machine learning, bioinformatics, and mathematics. Our team-based approach to applied research combines practical experience and strong technical expertise, as well as academic insights and theory.
